Business Information

THESE PRICES are in effect for Spring 1943 season.

PRICES named in this Trade List apply only to orders placed by nurserymen, florists and dealers.

PACKING. All goods are packed in boxes or bales for which we charge sufficient to cover cost of material used.

CLAIMS. If any must be made immediately upon receipt of goods, and if just, made satisfactory, but in no case are we responsible for more than the purchase price of the stock in question. We will not be responsible for failure to fill orders in full or for any damage or delay to stock after delivery to the transportation company.

TERMS: We offer the usual terms; net 30 days from date of shipment to those of known responsibility but must have satisfactory business references from others or remittance must accompany order. Those desiring stock shipped by express C. O. D. will please remit 1/4th the amount of their purchase when ordering. Other terms by special arrangement.

NON-WARRANTY. We give no warranty expressed or implied, the purchaser assuming all risk and responsibility of transportation, growth, planting, life of stock or any other matter on any stock we sell. We send out good stock carefully grown and packed but cannot control conditions after it leaves our care. We exercise the greatest care to keep our stock true to name and are willing to replace on or per proof any stock that may prove otherwise, or refund the amount paid us for such stock, but it is mutually agreed that we shall not at any time be liable for any greater amount.

TELL US HOW TO SHIP. You may ship by freight or express and give us full instructions for delivery if by freight. This may help in getting the stock to you with the least delay possible.

TIME OF SHIPMENT. We ship every week in the year with the possible exception of early winter when bad weather conditions may interfere, although this is very seldom. Of course, there is a regular season for shipping the different plants but if you want them out of season and are willing to take the risk of good delivery we will pack with the utmost care and get them off to you at most any time you want them.

PLAN TO VISIT OUR NURSERY

We will certainly be glad to have you come and see our stock for yourself. We have many items in too small lots to list. Among them there may be some that you are especially desirous of securing. If you are not familiar with the varieties we are offering we will send you a descriptive list of most of the stock offered herein, if you will ask for it.

We are located on the Eastern Shore of Maryland, about 100 miles directly south of Wilmington, Delaware. See the road map on fourth cover page.

MADE TO ORDER ALUMINUM LABELS

We will make from your list of varieties, Embossed Aluminum Labels, one-half inch wide at five cents each in any quantity desired. These labels will permanently identify your plants as they will last indefinitely.

A New Innovation
ROOTED CUTTINGS
READY ABOUT JUNE 1ST

This season we are offering a selection of rooted cuttings. These cuttings are in cold frames outside and in greenhouse beds. Most of the Azaleas are now rooted and can be shipped at any time when weather permits. Some of the other stock is now rooted and some is not. If you want the stock before about June 1st, send your list in and we can tell you what is ready.

Do Not Order Before Reading This

You cannot treat most of these cuttings just any old way and get a stand. They will most usually die if you do. But, if you are willing to coddle them a little you should get a good stand. We will send you the same kind of stock we use and we most always get a perfect stand, hardly ever lose any. We have our ground in a good mellow condition, cover them with lath shade (that is plastering lath spaced about the width of a lath apart and raised about 15 to 18 inches above the ground) as soon as planted and kept from drying out by overhead irrigation. Any system of shading and watering will do, if it is properly attended to. If you will take care of the plants we will be glad to have your order but if you cannot do this we had rather you yould not send it to us. If they are not properly taken care of you will probably have a great loss and then every time you think of them you will think "There's a bunch of stuff from Tingle that went bad." Rooted Cuttings are all right if handled right but they are no good if not. So, if you are not willing to take the responsibility do not send your order.

ROOT GRAFTS

We are again offering a list of root grafts of stock that is very much in demand at the present time. We can furnish most of these varieties in thousands lots or more. Advise ordering early as they are made to order only. If you want other stock grafted ask us about it. Our prices will be reasonable.

FLOWERING CRAB

Price: $7.50 per 100, $60.00 per 1000

For list of varieties see page 35.

FLOWERING CHERRY

Price $10.00 per 100

Amanogawa, Fugenzo and Kwanzan.

RED OR PINK FLOWERING DOGWOOD

Price $10.00 per 100

It seems impossible to supply the demand for Red Flowering Dogwood and would suggest placing your order early.

Strawberry Plants

The demand for strawberry plants last year was not as heavy as it was in 1937. Many growers did not make their usual plantings and is usually the case the demand for plants should be larger than it was last spring. Another cause for increased demand this season, is with very few exceptions Strawberries sold for the best prices in several years.

Pittsville section is recognized as one of the leading strawberry producing sections in the country. The season's average price paid per 24-quart crate at the auction block in Pittsville was $3.07; the season's average price for the entire Delmarva Peninsula was $2.76. We all know it takes good plants to produce superior fruit and the point we want to make is that if our plants will produce berries that will sell for so much above the average they should be expected to be good plants to use in establishing a fruiting bed in other sections.

Whether you want only a few plants or a million we believe you will find us fully able to take care of your requirements. We will ship the plants to you or direct to your customers under you tags.

Let us take care of your Strawberry plant orders this season. We have had 31 years growing and packing experience with strawberries. Our strawberry plant business is handled entirely separate from our other nursery stock.

These prices are for delivery Spring of 1939.

We sometimes can make lower prices on large lots.

It is estimated that there is only 50 percent to 60 percent of a normal crop of strawberry plants in the Maryland and Delaware strawberry plant area. If the demand is as heavy this spring as it was last, there will probably be a shortage and our suggestion is that you make your reservation as early as possible.

DESCRIPTION OF STRAWBERRIES

ABERDEEN. A midseason variety especially recommended for New Jersey and farther north.

AROMA. This is one of the old reliable midseason to late varieties and extensively planted in many sections.

BIG JOE. One of the midseason varieties that is very good where conditions suit and not worth much if they don't.

BLAKEMORE. This is hard to beat as an early berry in many sections. Always sells well and generally produces good crops. Very good the past season. Easy to grow.

CATSKILL. An introduction of the New York Experiment Station. Highly recommended. The largest and most productive of all the midseason varieties. Considered the best midseason variety. You will be safe in pushing Catskill especially for northern growers.

CHESAPEAKE. This is the finest dessert berry of the late varieties and will keep better and sell at higher prices than any other late berry we know of. The fruit is large and handsome and will stay so until the end of the fruiting season. Berries are a rich glossy red with bright yellow seed, have a large green cap and are very uniform size. Chesapeake is firm and will carry to the markets in the best of condition.

DORSETT. An introduction of the U. S. Department of Agriculture. Early, of most excellent flower. Generally good except in few sections does not do so well.

DR. BURRILL. Seems to be a case of another name for Senator Dunlap. Good for the west and southwest.

FAIRFAX. Another U. S. Department of Agriculture introduction. A better later and of equally as good flavor as Dorsett. One of the best early-midseason varieties.

FROSTPROOF. A western variety of many good qualities among which is its great resistance to frost.

GANDY. For fifty years has been considered one of the very best real late varieties.

GIBSON. An old standard midseason variety especially recommended for canning but too soft for long distance shipping.

HOWARD 17. This is so near like Premier that it is hardly possible to tell any difference although some growers think it better.

LUPTON. One would not likely grow this variety if he was going to eat the fruit himself as it does not begin to have the quality of some of the others but it is very attractive and shows up so well when it arrives on the market that it most always brings the top prices and this is what the commercial grower is interested in. Good grower, late, attractive and sells well.

PATHFINDER. A new variety originating at the New Jersey Agricultural Station. This berry has attracted much favorable attention among growers and others who have seen it in fruit. Especially recommended where Premier does well and is a few days later in fruiting. We suggest you push it.

PREMIER. For a good many years this has been the best plant seller of them all, hence, has been a profitable one for the berry grower. Early, almost frost resistant, always producing good crops, attractive, good grower, productive, medium to large berries, and if not too wet at picking time a good shipper but if there is a lack of sunshine the berries do not keep well. In some sections they will not plant anything else for a crop of early berries.

SENATOR DUNLAP. For many years this has been very heavily planted in the middle west and continues to be in heavy demand. Early midseason. Good grower.

WM. BELT. This is one of the best flavored of the late berries. The berries are irregular in shape, fairly large, bright glossy red with a green cap. For a home garden or local market Wm. Belt is still good.

WYONA. One of the latest of the regular season varieties and especially worth while on this account. Of the Gandy type but later.

FALL BEARERS. These berries are now so generally known that it is hardly necessary to say much about them. **Mastodon** is recognized as being the best for commercial purposes. **Champion** or **Progressive** is the old standard one and probably the best flavored. **Gem** is one of the newest and very highly recommended by the introducers, and is doing well with us this season. **Lucky Strike** is the spiciest of all strawberries, and it is also fairly productive.

Asparagus Roots

We are only growing the **MARY WASHINGTON** variety of Asparagus as it seems this is the one nearly every one wants to plant now. It is generally considered the best for growing, shipping and eating. We have some nice crowns this season and will appreciate your order.

Good Stock at Lower Prices

Last season we had a smaller stock of Lining-Out stock than we have had for several seasons. Due to increased sale the previous season and some "bad luck" in propagating.

This season we probably have the largest stock we have ever offered and have reduced our prices very materially.

The stock is as good or better than our average and we believe our average is as good as any grower's. Come and see it or if you cannot come send your order and leave it to us to please you.

Ornamental Stock

Quantities: 1 to 5 at the each rate, 5 or more at the 10 rate, 25 or more at the 100 rate, 250 or more at the 1000 rate.

AZALEAS

Azaleas have been one of our specialties for many years. This season we are pleased to offer the largest stock we have ever grown, and at reduced prices, too. If you have not been getting your Azaleas—Lining-Out or Specimen—from us we wish you would try ours this season. We aim to please you with Azaleas as well as with our other stock.

KURUME AZALEAS

The Kurume Azaleas have been known to America only about 16 years, but in that time they have made wonderful progress as hardly a garden but what has one or more varieties of this wonderful type of Azalea. They are also well adapted to forcing—thousands of them being sold for Mother's Day, Easter and Decoration Day. They are comparatively easy to grow and they make such a wonderful display that the demand is continually increasing. Many of the varieties are hardy out of doors as far north as Long Island. They are extremely floriferous, and in season the blossoms completely cover the flowers. The colors are of almost every hue and shade as you will find below.

Varieties with an asterisk * are the hose-in-hose or double type.

Each X means one transplanting.

Our 1-yr. field beds XX trans. have been grown in the greenhouse one year and in outside beds one year thus making them really two years old. The 2-yr. in field beds XX trans. are two years from greenhouse and thus three years old.

Hinodegiri Azalea is our best seller and it is probably the best all-around Azalea being grown today. We grow it in large quantities and have made our prices accordingly low. We are really proud of our Azaleas this season.

HINOMAYO. Flowers a beautiful soft pink. Resembles Hinodegiri in habit of growth but leaves are smaller in size and a lighter green. We consider this one of the best pinks.

KAEMPFERI HYBRID AZALEAS

In these new Kaempferi Hybrids—the result of crossing Kaempferi and Malvatica—there has been obatined the hardiest type of evergreen Azalea, with a good range of form and color in the flowers so far achieved. Several year's tests have demonstrated that these new Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts.

AZALEAS AND CAMELLIAS By H. H. Hume

Interest in Azaleas and Rhododendrons is greatly increasing. Until now, little information on varieties, care, and culture of these plants has been available. Mr. Hume accurately and thoroughly describes the varieties best suited for various uses and discusses questions on culture, such as soils, fertilization, planting, propagating, and general care, indoors and out. He has taken special care to describe accurately the several groups and varieties, and his suggestions on the use and culture are very practical. If you are growing Azaleas and Rhododendrons you will find this book much help. While the book is titled Azaleas and Camellias it applies equally to Rhododendrons. $1.50.

NEW U. S. D. A. AZALEAS

A group of new varieties of this wonderful June-blooming hardy evergreen Azalea released by the U. S. Department of Agriculture. Most of these were collected by the Department at the Agricultural College, Imperial University Komaba, in Tokyo, Japan. They have been tried out by the U. S. Department of Agriculture staff and other interested growers and have been selected as being worthy of introduction in this country. We were one of the original growers selected to propagate these for the trade.

In ordering these Azaleas please use the number following the name, this will insure getting the variety wanted.

Rideway's color chart used as a guide to colors.

Our 1-yr. field beds XX trans. have been grown in the greenhouse one year and in outside beds one year thus making them really two years old. The 2-yr. in field beds XX trans. are two years from greenhouse and thus three years old.

Control

Both Stages of Damping-Off

Treat with CUPROCIDE

FOR SEED PROTECTION

Spray with CUPROCIDE 54

FOR PLANT PROTECTION

CUPROCIDE. Used as a dust for treating seeds, and as a spray material for drenching plant bed soil, and for spraying seedlings. Cuprocide controls damping-off of seeds and seedlings. It is also effective as a spray material for control of mildew, blights, etc. It does not stain foliage. **1 lb. package 90c; 5 lbs. $4.00.**

CUPROCIDE 54. A new, and highly effective spray material, especially made for controlling damping-off after seed appear. **3 lb. bag at 37c per lb.**

Full instructions for use of both of above sent on request.

EMBOSSED ALUMINUM LABELS

We will make, from your list of varieties, Embossed Aluminum Labels, one-half inch wide at five cents each in any quantity desired. These labels will permanently identify your plants as they will last indefinitely.

ARNOLDIANA AZALEAS

In 1914, the late Jackson Dawson, then superintendent of the Arnold Arboretum, at Boston, Mass., created a splendid new type of hardy Azalea by crossing Azalea Kaempferi and Azalea Amoena. Of the seedlings thus produced a considerable number of them were grown at Boston from their infancy until flowering age, when the following ones of unusual beauty and vigor of growth were selected.

	Each	10	100	1000

NO JAPANESE BEETLES IN OUR NURSERY

After scouting and inspection several times during the past season by the Federal and State inspectors they have again classed our nursery as being free from the Japanese Beetle. Therefore you may send us your order without in any way running the risk of getting any beetles in a shipment from us. A Federal Permit and State Inspection Certificate certifying to the above will be attached to all shipments outside of the Japanese Beetle area.

ARISTOCRATS OF THE GARDEN By Ernest H. Wilson.

Undoubtedly the books you must have if you want to know about the latest introductions in plants. Also contains much information about the older varieties. Tells where a good many of the plants offered herein came from, their habits, where to use them and a mine of other useful information. More interesting than any other book of adventure or even your favorite detective story. Two volumes in the set for $10.00 and worth it.

We publish a retail descriptive list describing the items listed herein and many more. If interested ask for it.

TROWBRIDGE GRAFTING WAX

Probably the best known Grafting Wax on the market. It was formulated about 86 years ago and consists of high grade Gum Rosin, Beeswax and Tallow. Extreme care is exercised in blending these ingredients in order that Trowbridge Grafting Wax may be possessed of the most even consistency and elasticity of any.

Trowbridge Grafting Wax is preferred by most nurserymen and orchardists since it may be used either by the warmth of the hands or melting in a suitable melting pot. When used by the hands, one should grease their hands well when using it. When used by melting, the wax is applied with a small brush.

It is used for grafting, budding, top working, etc., of all kinds of fruit, ornamental trees, shrubs and vines. It is unexcelled for use in painting cuts, bruises and after trimming.

Price 50c per pound, 10 lbs. or more at 40c per pound.

NO JAPANESE BEETLES IN OUR NURSERY

After scouting and inspection several times during the past season by the Federal and State inspectors they have again classed our nursery as being free from the Japanese Beetle. Therefore you may send us your order without in any way running the risk of getitng any beetles in a shipment from us. A Federal Permit and State Inspection Certificate certifying to the above will be attached to all shipments outside of the Japanese Beetle area.

ILEX (Holly)

We consider the Holly one of the very best ornamental trees or shrubs. Nothing is prettier than one of our American Hollies with great clusters of bright red berries and dark green leaves shining above the snow in winter. The nurseryman who will grow a collection of Hollies to a specimen size will have something he can sell whether times are good or whether they are bad. There is always a demand for them, and there will be as long as any other plants will sell. We believe there is money in growing them and will increase our stocks as fast as we can

ILEX AQUIFOLIUM (English Holly). This is not as hardy as the American Holly (Ilex Opaca) but can safely be planted from New Jersey southward. The foliage is a bright glistening green and the berries are larger than the American. A very beautiful Holly.

TWO NEW Worthwhile Plants

WE ESPECIALLY RECOMMEND BOTH OF THESE PLANTS

A New Magnolia To Be Named

TYPE OF GROWTH: This plant grows in a pyramidal shape, more bushy and twiggy than the M. Stellata. It is a faster growing plant than the M. Stellata, but not as rapid as the Soulangeana, the branches being much more slender. It bears flowers in great profusion.

TIME OF BLOOMING: Approximately two to four weeks later than the Stellata, not having been affected by freeze or frost.

DESCRIPTION OF FLOWERS: Flowers are well placed on ends of branchlets, measuring from 4½ to 6 inches across. The flowers consist of three to five layers, running from twenty to thirty-two petals, which have more character than the Stellata and stand in a more upright position.

COLOR OF FLOWERS: Blush pink, buds flesh pink. This magnolia is slightly darker than the M. Stellata Rosea, but does not have the purplish tint of the Stellata Rosea.

ORIGIN: We believe this plant to be a product of cross-fertilization between M. Stellata and M. Soulangeana, although the numbers of layers of petals is greater than we have seen either in the Stellata or the Soulangeana, and the number of petals are correspondingly greater. We believe this to be among the finest magnolias in existence.

Price, Heavy 3 ft. plants $4.50 each.

A New Holly "Croonenburg"

NAME: This plant was named by Prof. Carl A. Sorg, formerly of Pennsylvania State College.

ORIGIN: The origin of this plant is somewhat clouded. The original plant was discovered on Lynhaven Bay in a garden close to an old house site occupied by the Croonenburg family. Situated close at hand were a number of magnificent specimens of English Hollies, which had been brought over by Mrs. Croonenburg's father from Belgium and known to them as Belgian Holly. Although this plant takes on many attributes of the English Holly such as the color, and the size and color of the berries, we believe it to be of the true Ilex Opaca strain.

The original plant is 35 ft. high and 22 ft. in breadth with limbs running clear to the ground, and so dense the trunk cannot be seen without dividing the branches.

DESCRIPTION OF MATURE PLANT: In a mature plant, the leaves are 2½ to 3¼ inches long and 2 to 2½ inches wide, having about 7 to 9 spines of a very dark green, not having the usual yellowish tint found in the most familiar American Hollies. It bears berries from cuttings almost continuously, as three year old plants this year had branches weighed down with the growth. In a field of several thousand you could not see one plant without berries.

Price, Nice 2 to 3 ft. plants $4.50 each.

The supply of these two new plants is limited. If you want something really better we suggest an early order.

CUTTINGS

CHRYSANTHEMUM

ROOTONE speeds up the rooting of cuttings and increases percentage of successful propagation. The stronger root systems developed by ROOTONE give stronger, sturdier plants.

No solution or soaking treatment is necessary. Just dip the base of the cutting in the dry powder and set in the propagating bed or cold frame.

Thuja Pamila

Canada Hemlock

Hemlocks are very difficult to root but with ROOTONE treatment, the cuttings root in 60 days, 80% or more. Dogwood cuttings root best if taken between June 1st and August 15th, and require about 4 weeks. Most azalea hybrids respond well to ROOTONE.

ROOTONE WILL SET BERRIES ON HOLLY

Dr. Gardner, of the U. S. D. A. found that female holly trees, ilex cornuta or opaca, can be made to set fruit, that is, to form berries without pollen, if the flowers are dusted with ROOTONE in the spring. Thus the buyer of a berry-bearing holly need not have a male, or pollen-bearing holly, as ROOTONE dusting will take its place.

ROOTONE

PATENTS PENDING

The Plant Hormone Powder

What it is:

ROOTONE is a general stimulant for plants, supplying extra hormone at times when the plant is able to use more than Nature provides.

What it does:

ROOTONE treatment hastens and improves the rooting of cuttings; increases germination from seeds and bulbs, resulting in earlier flowering; acts as fungicide in controlling damping-off.

SEEDS and BULBS

Seeds of all kinds will germinate faster and in a higher percentage if dusted with ROOTONE before planting. Pansies, snapdragons, delphinium and petunias respond especially to ROOTONE Bulbs, particularly gladiolus and lilies, break dormancy much more uniformly, and develop more roots with ROOTONE pre-treatment. The resulting plants grow faster and flower earlier.

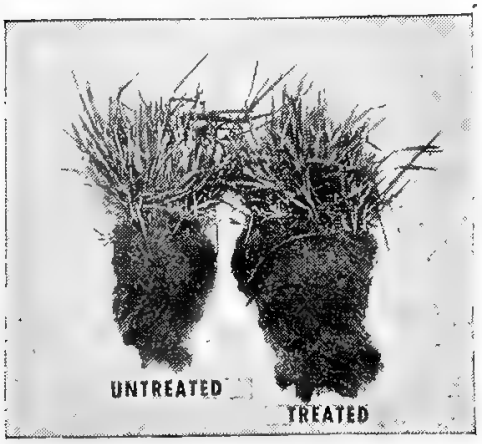
For CUTTINGS

ROOTONE speeds up the rooting of cuttings and increases percentage of successful propagation. The stronger root systems developed by ROOTONE give stronger, sturdier plants.

No solution or soaking treatment is necessary. Just dip the base of the cutting in the dry powder and set in the propagating bed or cold frame.



Grass

For GRASS SEEDS

"Use one-ounce of ROOTONE to 10 pounds of grass seed. Shake the two together until the seed is evenly coated. ROOTONE produces faster germination which means a heavy stand of grass in a much shorter time. It also gives much heavier rooting, so that the turf stands up even in severe drought."

SPECIAL STRENGTH

For those who want a stronger powder for use on woody cuttings, we have "ROOTONE No. 10." This is priced at $10.00 per pound and is made to order. It produces more roots on such cuttings as hemlock, spruce and azalea mollis.

ROOTONE Is Best For Cuttings

Because—

LOW COST—1/30 to 1/50 of a cent per cutting.

SIMPLICITY — No skill is needed to apply ROOTONE. No measurements, no vials, no elaborate charts to follow, or clock-watching are needed. Just dip and plant.

SPEED OF ROOTING—The time for rooting of cuttings is cut by ROOTONE treatment to anywhere from one-half to one-tenth of the time required without treatment.

SURENESS OF ROOTING—Cuttings that root with difficulty such as holly, magnolia, arbor-vitae, lilac and dogwood will respond in greatly increased percentages and in much shorter time.

2 oz. Jar $1.00 • 1 lb. Can $5.00

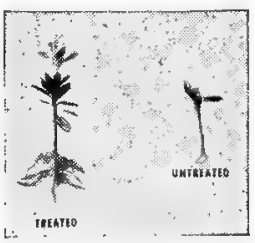
A two ounce jar will treat up to 3,000 cuttings; one pound will treat up to 30,000 cuttings.

For SEEDS And BULBS

Seeds of all kinds will germinate faster and in higher percentage if dusted with ROOTONE before planting. Pansies, primula, delphinium and petunias respond especially to ROOTONE. Bulbs, particularly gladiolus and lilies, break dormancy much more uniformly, and develop more roots with ROOTONE pre-treatment. The resulting plants grow faster and flower earlier.

Chrysanthemum

We recommend ROOTONE because we have found it of much help to us in rooting cuttings both in saving of time and in increased roots to the cutting. We use it on all the cuttings we put in except the ones for checking for comparison of results. We know it pays us both in better roots and time saved in cutting beds.



Azalea

2 WEEKS QUICKER ROOTING

On our check plots of Azalea Hinodegiri this summer we could pot the rooted cuttings a little over 2 weeks earlier where we used ROOTONE than where we did not. This meant a lot as it helped us get two crops of rooted cuttings in one season.

A GRAND NEW BOOK JUST PUBLISHED

"Propagation of Plants"

By M. G. KAINS and L. M. McQUESTEN

A Complete Guide for Professional and Amateur Growers of Plants by Seeds, Layers, Grafting and Budding, with Chapters on Nursery and Greenhouse Management

Every plant propagator and experimenter with plant propagation needs this book. Its authoritative treatment of the subject will give the reader confidence that he may base his work on the principles laid down and the practices recommended. Its cogent but simply written text leaves no doubt as to the means and media to adopt. Its abundant detailed halftone and line drawing illustrations so clearly portray the successive steps in the various methods and practices that even the beginner will find it more difficult to err than to follow the directions.

We think so much of this book that we will refund your money if you are not entirely satisfied with it.

Beautifully printed and bound and illustrated with 350 drawings and photographs, which were especially assembled for this volume. These are extremely helpful to an understanding of the text

TROWBRIDGE GRAFTING WAX

Probably the best known Grafting Wax on the market. It was formulated about 86 years ago and consists of high grade Gum Rosin, Beeswax and Tallow. Extreme care is exercised in blending these ingredients in order that Trowbridge Grafting Wax may be possessed of the most even consistency and elasticity of any.

Trowbridge Grafting Wax is preferred by most nurserymen and orchardists since it may be used either by the warmth of the hands or melting in a suitable melting pot. When used by the hands, one should grease their hands well when using it. When used by melting, the wax is applied with a small brush.

It is used for grafting, budding, top working, etc., of all kinds of fruit, ornamental trees, shrubs and vines. It is unexcelled for use in painting cuts, bruises and after trimming.

Price 50c per pound, 10 lbs. or more at 40c per pound.

AS GOOD AS CAN BE GROWN

We are exerting every effort to produce the very best stock that can be grown, and in our thirty-one year's experience we believe we have never offered bigger values than we offering this season. Even with the short supply of lining-out stock we have kept our prices at a low level. We feel sure you will be more than pleased with the stock we send you if you will give us your order.

We try to secure our propagating wood from only the very best type of plants, and by doing this we can furnish you stock that should be of the best that it is possible for you to get anywhere, regardless of price.

UNIVERSITY OF MARYLAND

State Horticultural Department—Certificate of Nursery Inspection

This is to Certify, that we have examined the nursery stock of the Tingle Nursery Co., growing in their nurseries at Pittsville, County of Wicomico, State of Maryland, in accordance with the laws of Maryland, 1898, Chapter 289, Section 58, and that said nurseries and premises are apparently free, so far as can be determined by inspection, from the San Jose Scale, Peach Yellows, Pear Blight and other dangerously injurious insect pests and plant diseases.

LILACS (Syringa)

very reasonable prices. Note our very low

We are offering a very choice selection at prices on one-year plants. They are just right to line-out and grow-on.

AUNT MARY'S SWEET CORN

THE SWEET CORN SUPREME

This is the most wonderful Sweet Corn we have ever grown and one grower describes it as "the best sweet corn in the world."

Is of the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's corn by its excellent quality, sweetness and flavor makes a stronger appeal to the corn-loving public than any other variety and that appeal continues long after you are tired of other sweet corns.

Price liberal size packets, 35c each, 3 for $1.00 postpaid.

If after growing this wonderful sweet corn you are not entirely satisfied we will refund every cent you paid for it.

HARDY HYBRID RHODODENDRONS

Most everybody agrees that Rhododendrons are among the most showy of all flowering plants, and most everybody would also like to grow some but the price has always been a great drawback to quantity planting. We believe you will find our prices low enough so that you can resell them at a fair price and still make a good profit. This collection is among the very best of the hardy hybrid varieties; all good growing and good flowering kinds. Push them a little and see how your sales increase.

Send us a trial order for Rhododendrons. We know you will like what we send you.

PLANT PROPAGATION—999 Questions Answered.
A book by Alfred C. Hottes. The increasing of plants by seeds, cuttings, divisions and by grafting is one of the most fascinating miracles each of us can perform. This little book tells how. 238 pages; 136 illustrations. $2.00 postpaid.

New Root-Forming Chemical Speeds Plant Propagation

HORMODIN A

Stimulates Rapid Root Growth on Cuttings at Low Cost. Saves Time and Space.

Hormodin assures quicker and better rooting of cuttings in higher percentages than ever before possible. Many species heretofore impossible to propagate from cuttings, may now successfully be grown from cuttings treated with Hormodin.

Broad and narrow leaf evergreens; apple and other commercial fruit trees; blueberries, dahlias, daphne; ornamental trees such as elm, maple, linden, and magnolia; gardenias, grapes, common shrubs, and herbaceous annuals and perennials are only a few of the many plants which may readily be propagated from cuttings treated with Hormodin.

Hormodin also reduces the time it takes for roots to develop.

Hormodin saves bench space, time, and money, because it hastens the turnover in the propagating bench and increases the percentage of cuttings which strike root. Furthermore, because of their profuse root system, cuttings treated with Hormodin may often be transplanted directly from the bench to field conditions.

Hormodin treatment is simple. No special equipment is needed. Hormodin comes in liquid form and is applied as a dilute, water solution. The cost is only a fraction of a cent per cutting. Hormodin also simplifies the taking of cuttings, since cuttings can be made without reference to buds or nodes if they are treated with Hormodin.

Prices of Hormodin "A" postpaid.

TAXUS (Yew)

It is only in the past few years that nurserymen in the United States have begun to really appreciate and grow the Yew. In England there are Yews more than a hundred years old, but unfortunately the English Yew (Taxus Baccata) is not reliably hardy in the north and many do not realize that the Japanese and many forms of Media are perfectly hardy in and around Boston, and the Japanese even in northern New England.

They are not so particular as to character of soil excepting it should not be too wet, but they do appreciate a plenty of good plant food. They are immune to many plant diseases and insects so destructive to many other evergreens.

The Yew in its many species and forms can be well used in most all places where any other evergreen will do well.

We honestly believe you will do well to plant and grow on some of these Yews.

	Each	10	100	1000
TAXUS BACCATA (English Yew). Widely planted in English churchyards. A good ornament. Hardy as far north as New York City. Upright, dark green foliage. Very good for the South and where it is hardy.

12 to 15 in. B&B	$0.85	7.50		
TAXUS CANADENSIS (Canadian Yew). Low shrub usually diffuse and straggling but occasionally ascending and up to 6 feet tall. The hardiest of the Yews, but less handsome than the other species, one of the chief drawbacks being the reddish tinge the foliage assumes in winter.				
* 4 to 6 in. trans.		$1.25	$10.00	
TAXUS CANADENSIS STRICTA (Dwarf Hedge Yew) The most satisfactory evergreen for dwarf edging hedges in severe New England climate. The best substitute for Dwarf Boxwood. Hardy, really dwarf, fine texture, dark, easily grown, shears perfectly, thoroughly tested for past fifteen years. Also excellent for use in general plantings of dwarf evergreens.				
* 3 to 4 in. trans.		$1.00	$8.00	$75.00
TAXUS CUSPIDATA (Japanese Yew). For any and every purpose in which evergreens are required the Japanese Yew can be recommended. Perfectly hardy in New England and Ontario, immune from most diseases and pests. Accomodating to an extraordinary degree, withstanding shade or full sunshine, dark green at all seasons of the year. Small wonder this plant has been acclaimed "Japan's greatest gift to the gardens of America." Under this heading we are offering the **spreading** or **wide growing** type which grows as broad or broader than tall.				
* 4 to 6 in. trans.		$1.00	$7.50	$70.00
* 6 to 8 in. trans.		1.25	10.00	95.00

18 to 24 in. B&B	1.25	10.00	85.00	

We can furnish the above three types of Taxus Cuspidata in large quantities, beautiful stock, and we have tried to make the price reasonable.

TAXUS CUSPIDATA DENSA (Compact Dwarf Japanese Yew). Low form making a dense, sometimes hemispherical bush with ascending branchlets. One of the most handsome of all dwarf evergreens.				
* 4 to 6 in. trans.		$1.25	$10.00	$90.00
12 to 15 in. B&B	$1.50	12.50		
15 to 18 in. B&B	2.00	17.50		
TAXUS CUSPIDATA NANA (Dwarf Japanese Yew). A shrubby form with spreading branches closely clothed with short branchlets; leaves somewhat shorter and duller than the type; slow growing, rather compact. Often offered as Taxus Brevifolia.				
* 4 to 6 in. trans.		$1.25	$10.00	$90.00
9 to 12 in. B&B	$0.85	7.50	65.00	
12 to 15 in. B&B	1.25	10.00	90.00	

All Lining-Out sizes are marked by an *. Sizes not so marked are classed as Specimen Stock.

30 to 36 in. B&B	2.00	18.00		
TAXUS HUNNEWELLIANA. A natural cross between the Japanese and Canadian Yews. An intermediate between the parents in habit of growth, in color of foliage and in general appearance. It is perfectly hardy and of elegant form but in the winter the clear green of its foliage is masked by a yellowish-bronze pigment.				
* 4 to 6 in. trans.		$1.50	$12.50	$115.00
* 6 to 8 in. trans.		1.75	15.00

12 to 15 in. B&B	$1.00	8.50		
TAXUS MEDIA KELSEYI. The first of the new Yews to be propagated from the point of view of its showy red fruit. Fairly slow grower. Dark green, dense needles of the brevifolia type. Upright bush. Begins bearing berries even on small plants. Larger sizes literally infested with the bright red fruits. A real worth-while new plant.				
* 4 to 6 in. trans.		$1.75	$15.00	$135.00
* 6 to 8 in. trans.		2.25	20.00	
TAXUS MEDIA VERMEULEN. Very compact and dense upright grower. Broad base and narrow top. Beautiful pyramid heavily interspersed with red berries.				
* 6 to 8 in. trans.		$2.00	$17.50	
TAXUS MEDIA WELLESLEYANA. Another form of Media making a dense, broad column; foliage a fine dark lustrous color. Should prove valuable.

MORE HATFIELD YEWS

The following varieties were grown from stock purchased from the late T. D. Hatfield. He selected these as being the best of his unamed varieties and we are still carrying them under his original numbers. No. 18 is one of the most rapid growers of the lot and we believe it will make one of the best for hedges. All of them are good.

Blueberries

During the past few years Blueberries have been very much in demand even at the high prices asked for them. Prices are much lower now and you should get in on this new business. Offer them to your trade and see the extra sales you will make.

We offer the following varieties: Cabot, Concord, Jersey, June, Pioneer, Rancocas and Rubel, in 15 to 18 in. size at 70c each; 18 to 24 inch size at 90c each, in any quantity wanted.

You can order the varieties you want or we will select the varieties for you. Will ship to you or direct to your customers.

HARDY PERENNIALS

One to four plants of a variety at each rate; five at ten rate; 25 at 100 rate. Please add 20% if your order calls for less than five plants of a variety. No charge for packing.

Most of the stock offered is field grown and one or two years old, except of course, where noted.

Height specified in description is the ultimate height.

r indicates alpines and rock plants, some of which can also be used in perennial beds and borders. c indicates best cutflower kinds.

Hardy Amaryllis—Magic Lily

We have, at last, a good stock of bulbs of this most interesting plant. They will run 3 inches or more in diameter. Great big husky fellows. At 10 for $4.00; *100 for* $35.00.

This bulb, also known as Lycoris Squamigera, is a native of Japan and one of the most interesting members of the Amaryllis family. It produces attractive green foliage in the spring which disappears in midsummer. About a month later, as if by magic, the flower stock appears, bearing a cluster of 7 to 12 fragrant lily-shaped flowers of delicate lilac-pink, shaded blue. Perfectly hardy in the northern states and may be left in the ground year after year unmolested.

Vigoro, the complete plant food, supplies all growing things with the 11 vital elements plants require from the soil. Properly fed plants have a better chance to attain full growth and maximum beauty. 100 lb. bag $4.00, 50 lb. bag $2.50.

PLANT LABELS FOR TYPEWRITER USE

We can furnish a good tough, paper plant label, slotted, in sheets so you can type the variety on. Samples and prices on request.

Native Peat or Wood's Mold

To grow Azaleas and Rhododendrons successfully you must have leaf mold, peat in some form or some similar substance. We have used Russian, German and Holland Peat, leaf mold collected from under trees in our local forests, but by far the best material we have ever used is a form of native peat, a deposit of which we have found near here. It runs from twelve to twenty four inches thick and is composed of thoroughly decayed leaves and other material from hardwood trees which has been generations in the making. We fully recommend this for use in growing stock and to use in a mixture of soil and sand in which to sow seeds but we do not recommend it for use in propagating evergreens and other soft wooded shrubs by cuttings.

If you would like to try it we will send you a two-bushel bag for $1.00. Will quote special prices on larger lots. Try a sample bag, we believe you will like it so well you will want more.
